## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-2, 5-6, 8-11, and 14-18, drawn to method and kit for inhibiting platelet aggregation or thrombosis using a composition, classified in class 436, subclass 69, for example.
  - II. Claims 3-6, 9, 12-18, drawn to method and kit for preventing and treating thromboembolic disorders using a composition, classified in class 424, subclass 9.2, for example.
  - III. Claim 7, drawn to method of detecting the presence of gpIIb/IIIa, classified in class 435, subclass 7.21, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination in Group II requires treatment procedure for thromboembolic disorders. The subcombination has separate utility such as for use in monitoring efficacy of new anticoagulating compounds.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions, an different effects in that Invention I uses adenosine in vivo to prevent platelet aggregation in a mammal and Invention II contacts adenosine to a sample in vitro to determine the presence of gpIIbIIIa.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). ). In the instant case the different inventions have different modes of operation, different functions, an different effects in that Invention II uses adenosine in vivo to prevent and treat thromboembolic disorders in mammals and Invention III contacts adenosine to a sample in vitro to determine the presence of gpIIbIIIa.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper. Literature search for each of the methods and kits is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
